FOR IMMEDIATE RELEASE

July 21, 2016

‘No Swim’ advisory issued for Nokomis Beach

SARASOTA COUNTY — As a precaution, Sarasota County health officials have issued a “No Swim” advisory at:

Nokomis Beach: 100 Casey Key Road, Casey Key, Nokomis, FL 34275

The amount of enterococcus bacteria found during water quality testing on Wednesday, July 20 was outside acceptable limits. The beach remains open. Wading, swimming and water recreation is not recommended as long as there is an advisory. People are encouraged to read the signage and heed flags when present at area beaches.

Some bacteria are naturally present in the environment. However, the Environmental Protection Agency (EPA) has found a link between health and water quality. Signage advising the public not to swim or engage in water recreation at Nokomis Beach will stay in place until follow-up water testing results meet the EPA’s recreational water quality standard. The Florida Department of Health in Sarasota County (DOH-Sarasota) expects to have the next round of test results available on Friday, July 22.

Enterococcus bacteria can come from a variety of natural and man-made sources. These include pet waste, livestock, birds, wildlife (land-dwelling and marine), stormwater runoff, and human sewage from failed septic systems and sewage spills.

No sewage spills have been reported within one mile of the beach in the past month.

The rapid response team from Sarasota County has determined that the cause of the elevated bacteria levels is likely due to natural sources. Recent rains in the area that wash accumulated pollutants, including bacteria from pet feces, birds, and wildlife into local waters are an important factor. The response team also observed a large amount of bird activity along the shoreline which can contribute to these elevated readings.

Health and Human Services MEDIA RELEASE

FOR IMMEDIATE RELEASE

DOH-Sarasota Environmental Administrator Tom Higginbotham emphasizes that the Florida Healthy Beaches program protects beach goers when conditions are unsuitable for swimming. We do this by testing beach water and providing up-to-date explanations of the results.

“When these bacteria are found at high levels in recreational waters, there is a risk that some people may become ill. People especially those who are very young, elderly or who have a weak immune system who swallow water while swimming can get stomach or intestinal illnesses. If water comes in contact with a cut or sore, people can get infections or rashes.” says Higginbotham.

Local health officials emphasize that beaches remain open. However, residents and visitors are urged not to wade, swim or engage in water recreation at Nokomis Beach until the advisory is lifted. In addition, you should not eat shellfish such as crabs and shrimp collected in the immediate area of Nokomis Beach. However, it is safe to fish and eat fin-fish from these waters.

“Our coastline of over 30 miles of world-class beaches is a wonderful asset to our community,” says Virginia Haley, president of Visit Sarasota County. “Let’s work together to help preserve this amenity.”

To help keep beach water safe for swimming and recreation, do not allow pets to roam on beaches and in park areas and pick up pet waste. Additionally, children in diapers and people of all ages with diarrhea should not go into the water.

Testing has revealed bacteria levels within acceptable limits at the following area beaches:

- | | |
|-----------------------------------|---------------------|
| North Lido Beach | North Jetty Beach |
| South Lido Park Beach | Venice Beach |
| Lido Casino Beach | Venice Fishing Pier |
| Siesta Beach | Service Club Beach |
| Bird Key Park (Ringling Causeway) | South Brohard Beach |
| Longboat Key Public Beach | Caspersen Beach |
| Turtle Beach | Manasota Key Beach |
| | Blind Pass Beach |

Health and Human Services MEDIA RELEASE

FOR IMMEDIATE RELEASE

“It is important to know that our beaches are never closed,” says Haley. “When making beach day plans, be sure to check the latest reports on beach conditions and read beach condition signs at beach entrance ways. The signs are also posted on lifeguard stands when present.”
